Download 64bit system. Is
whole-body vibration training
effective in improving balance
in older adults? This study
examined whether whole-body

vibration training (WBVT) is effective in improving balance in older adults. Thirty-two older adults (aged 60-81 years) were randomly assigned into two groups (WBVT and control). Before and after 8 weeks of either WBVT or balance and strength exercises, static and dynamic balance were measured in various axes

and walking speed were measured. The WBVT group had significantly improved single-limb static and dynamic balance as well as the walking speed compared to the control group. WBVT could be used for the improvement of postural stability and walking speed in older adults.Q:
Incrementing a column in a

table at PHPMyAdmin I have a table with a column that has been given the type as "int(10) unsigned" but when I type into phpMyAdmin and try to increment or decrement a value by a value of 1 the value keeps on increasing. For example if my value is 10, I would expect it to be 11 but if I try to add one to it it is giving me the

number 20, can anyone help me, I'm sure it is something silly that I am doing wrong here! Thanks in advance A: MySQL's unsigned integers only go up to 2^{32} or 2147483647 - there are simply no negatives. If you were to increment a value greater than that, you would get a positive number as the result. If you

know that you always want to increment, you can just make it unsigned and let it hold the value you want: CREATE TABLE t (i INT UNSIGNED NOT NULL); And your results will be as expected: INSERT INTO t(i) VALUES (0); SELECT * FROM t; +-----+ | i | +-----+ | 0 | +-----+ UPDATE t SET i = i + 1; SELECT *

FROM t; +-----+ | i | +-----+ | 1 |
