Category: The Sims 1. Field of the Invention The present invention relates to a sheet post-processing

---

apparatus that performs post-processing, such as punching or stapling, on a sheet on which an image is formed by an image forming apparatus such as a copying machine, a printer, or a facsimile machine. 2. Description of the Related Art In a conventional sheet post-processing apparatus, image formation and post-processing are performed on an original sheet such as a paper sheet in a sequence as described below. First, an image is formed on the original sheet by an image forming apparatus. Then, the

---

sheet on which the image is formed is temporarily stopped at a sheet-through position on a sheet conveyance path, and is then conveyed to a sheet post-processing unit. The sheet post-processing unit performs post-processing on the sheet, and then conveys the sheet to a discharge tray. The sheet post-processing unit is provided with a sheet conveyance path that is parallel to the sheet conveyance path through which the sheet is conveyed from the image forming apparatus to the sheet-through

---

position. The sheet post-processing unit includes a first-stage conveyance path that extends from an inlet of the sheet conveyance path that is parallel to the sheet conveyance path through which the sheet is conveyed from the image forming apparatus to the sheet-through position, a second-stage conveyance path that extends from a position where the sheet reaches the sheet-through position, and a third-stage conveyance path that is provided behind the second-stage conveyance path in the sheet

---

conveyance direction and that extends to the discharge tray. When an original sheet on which an image is formed is conveyed to the sheet-through position, the sheet conveyance path is switched from the sheet conveyance path through which the sheet is conveyed from the image forming apparatus to the sheet-through position to the third-stage conveyance path, and then the sheet is conveyed along the third-
