The KEYMACRO macro is used to protect against time attack when the time of the authentication server changes. It also automatically identifies the most recent authentication attempt. The application reads the current time from the authentication server and sets the local system time. If the current time on the authentication server is different to the local system time, an warning is issued. If the current time is the same as the local time, the application sends a random number (so far between 7 and 9) to the authentication server. In this way an attacker that wants to break the authentication by trying to send a time that is the same as the current time, will have to send a packet with a random number between 7 and 9 which will not be the same as the last packet. For more details about the Rdatesvc application visit: Copyright (C) 2001-2011 O. Samuels -- This is a list of packages that I have compiled for the Supybots Mailing List. Syncing time via This application is part of the Ripe project, a collaborative effort to make Internet-based time synchronisation easier. The program described here is for Windows only. If you want to configure Ripe yourself, check out the Ripe-Documentation section on the Ripe website. The Ripe network is one of the most popular networks to use for Internet-based time synchronisation. If you are interested in time-synchronization, read more about the Ripe-Network on the Ripe-Homepage (currently in English). About rdatesvc.zip (100 kb) - sourceforge_dir/datesvc/rdatesvc.zip - install.txt - README.txt Instructions: - Install the rdatesvc.exe (click on the rdatesvc.exe on the left side) - You can configure rdatesvc in the preferences dialog - Run the rdatesvc.exe on Windows-Systems as service 70238732e0

Save a Web address to the clipboard so that you can paste it into the browser. Network Manger Manager Description: Current network state for your computer. Windows XP is a popular operating system developed by Microsoft. It is among the oldest operating systems in use today. It is currently used in many different devices like desktops, laptops, tablets, smartphones and more. Organize your Favorite Links in one place. Use it as a browser and download manager to organize and download files on the internet. Fantastic Browser Description: Fantastic Browser is a Firefox addon to show you the list of all bookmarked links in your all the tabs. This addon is a replacement for the AMO search box and allows you to search and instantly download anything from the Ubuntu Software Center. Where Is This App Installed? There are three possible locations: Type ~/.mozilla/plugins/libquicksearch.so into the address bar of your browser. Double click on the.so file Right click on the file and select "Open With" -> Gzip/Bzip2 Decompressor and then select mozilla-plugin-libquicksearch-extension.xpi The application is still in its infancy and is still in the process of being tested and developed. Installation How To Install: First open a terminal Go to the application folder Go to /usr/lib/firefox/plugins Copy the.so file into the location and rename it to libquicksearch.so Copy the.xpi file into the application folder and rename it to libquicksearch.xpi That's it, now restart Firefox and make sure to use Firefox in the default profile. You should see the "Where Is This App Installed" prompt below! A bug in the Firefox extension library prevents some of the firefox-addon-xp-uninstaller commands from working. A temporary work-around can be used until this issue is resolved. Open the terminal and type the following command: cd /usr/lib/firefox/components/ type the following command: ln -s libquicksearch.so libquicksearch.so.2 close the terminal and restart Firefox. The Firefox uninstaller does not appear to be working. The firefox-addon-xp-uninstaller commands can
