

## Download

A: Finally I found the problem. I posted a question in Lynda forum, and their answer is as below: In order to download the source file, you must be an Insider first and then go to your login page. Login here to get into Lynda. Then go to the premium content tab and scroll down to the Training Downloads section. This is where the instructor files and all are hosted and the file you seek is listed as Networking Animate-ftrZmXYLkbQcHh-2018.rar. Download that and extract it to your desktop. Then click on the director. For those who are looking for the same solution, click here to download the source file. Gallery Listing Agent Listed By Request more information Thank you for the email, we'll get back to you shortly Name (required)Email Address (required)Questions/Comments Description Beautiful three bedroom two and one half bath home with attached garage with an open floor plan. The home is spacious and features a large kitchen with island and open to the living room. There are three bedrooms and a full bath on the first floor. The second floor features a large bonus room. The third floor has three additional bedrooms and a full bath. Hardwood floors throughout the entire house. There is an attached two car garage and a driveway for three vehicles. Located within walking distance to the village of Bellevue, this home is a must see!Q: How to replace function param without changing return type? How can I update the content of a function's parameter without changing the return type? Consider the following function: int foo(float bar) { return bar + 2; } This can be called like: int x = foo(3.0); The type of x is int. I would like to be able to tell the compiler that I don't want the return type to be float, I want it to be int. How can I achieve this? A: You have to cast your function like this: int x = (int) foo((float) 3.0); A: In your case there is no practical difference. Either a float can be cast to an int without loss of information or the function returns an int by design.
