The Flip has been subject to many commercial products in the same vein as the iPod Touch. That includes a few third-party products that aren't as good but fit the same function. One such company is Epiphyte. Their interest was how far Apple could take the design before something was released from another company or something less than Apple could do. Their solution was to make it look like an iPhone. In this video we have a look at their product and it's not a looker The Flip is set to hit the market this year for \$299, but will probably sell for more than that. I wouldn't be surprised if the Flip got along the iPod Touch to help offset the price of the 3G model and give us a cheaper alternative to the iPhone. I also wouldn't be surprised if it came with Blackberry OS. Apple could have been a little more creative and done something like Geico did with the US\$34,000,000,000,000 car, but that's all speculation. I was just thinking about this today. If you had a flip phone with a color screen and sat on the top of your desk next to your computer monitor what would that look like? Do you think it would be useful or does Apple just look at it and say, "Uh-oh". I like the little slide-out unit for the web cam. I am wondering what Apple will do when it comes out. One it's on the market, will they be able to charge more? That would be interesting if they could charge extra for the cam on the slide-out base. Brewing beer is a complicated business, especially with all of the different types and styles of beer. One of the most common styles is pale ale. Pale ales typically have a light to medium body, are more traditional-like with an accent on bitterness and hop character, and are often barrel-aged. Let's take a look at some of the classic pale ale recipes that you might want to consider. 1. Old Ale (English Style) You may have seen Old Ale listed in some beer recipes that you find. These beers are relatively mild, with a medium body, and are particularly well-suited for colder months, like autumn and winter. Traditional English Old Ales are fairly bitter, with a very slight floral hop character and a lingering, malt-forward finish. These beers are a great starting point if you want to brew a traditional pale ale, and will appeal to a wide range of beer drinkers. Some common

recipes: 2. English Pale Ale (Mild Ale Style) Similar to Old Ale, English Pale Ale is a good starting point for a traditional-type pale ale. It has a light body and a slightly more intense hop presence than Old Ale. English Pale Ales have a more balanced bitterness profile than most pale ales, so the hop character and bitterness can be varied quite a bit. In addition to that, the English Pale Ales tend to be less heavily spiced than Old Ales, and are excellent for winter. Some classic recipes: 3. English IPA (American Style) As with the above, the body and bitterness can vary a fair bit, but English IPA is characterized by a bitter, spicy, and hop-forward bitterness. These ales tend to be much more heavily hopped, spicier, and higher in alcohol than most other pale ales. English IPA's are great for hop-heads, but people who really enjoy the bitterness of an IPA might have a hard time embracing this beer style. The spiciness 3ef4e8ef8d
