
Crack License Runtime Vijeo Designer Free

A: That runtime is for Windows Server (2008 and later) only. As noted by Darin, Windows Vista is not supported for the HMIG5U2. If you need Windows Server 2008, contact the vendor (I'll be the first to say you should contact your reseller to confirm this). The link you provided for Vijeo Designer Classic is for Windows Server 2016. I'm not sure where the "classic" runtime support is for the HMIG5U2 product. Q: c# - using linq to get all items of list inside of another list which has a duplicate list item I have a situation where I'm getting a list of tasks, inside of the task model is a list of tasks, inside of that list of tasks is a list of contacts. Each of the contacts can be assigned to a task, if so they are added to the list of contacts. So the list of contacts has a field called "TaskID", this is what I want to be all of the items of the "tasks" list which have "TaskID" = 6. (The task model and tasks list have been generated with the EF power tools.) I'm kind of stuck on how to approach this. I can do this with a foreach loop, and then have the code search through each of the items to see if they have the right "TaskID", but i'd like to try and do it via linq. public List GetContacts(int taskID, int taskCount) { List contacts = new List(); contacts = db.Contacts.Include(x => x.Tasks).Where(x => x.Tasks.Any(t => t.TaskID == taskID)).ToList(); return contacts; } A: This should do it (assuming you're using EntityFramework): db.Contacts .Where(x => x.Tasks .Any(y => y.TaskID == taskID)) .SelectMany(x => x.Tasks.Select(y => y)) .ToList(); Edit:

During run time, I want to move the button at index 1 to index 0, and vice versa. I have a method called buttonSwap() which swaps the two buttons, but I do not want to update the whole layout because that would mean two things happen. When I call the buttonSwap() method, one of the button will change position, and the other button will re-adjust itself to its previous position. How can I make sure the button that was at index 0, stays at index 0 and d4474df7b8
