----- LibEngsas is a cross-platform library that enables C++ developers to use the KDE and Qt framework in their commercial or personal applications. This library is separated into several important components: \* Support for C++ and Qt is provided by libEngsasCpp, a library that can be compiled into a Qt shared library. \* Data access capabilities are provided by libEngsasCppDB, a library of low-level and high-level wrappers for MySQL database access. \* Support for SQLite and PostgreSQL databases is provided by libEngsasCppPQSQL, a library of wrappers for the PostgreSQL database. \* All these components can be combined to provide a native database support in your program. LibEngsas License: ----- The LGPLv3 license is used to distribute all this code. LibEngsas is also able to provide you with object and compiled libraries containing only libEngsasCpp, libEngsasCppDB and libEngsasCppPQSQL (the corresponding shared libraries are libEngsasCpp.so, libEngsasCppDB.so and libEngsasCppPQSQL.so). This allows you to use the library in commercial applications, as an Apache project or GPL-licensed software. LibEngsas Documentation: ----- All documentation can be found in the "docs" directory. The MySQL-related documentation is provided by the included script wget The source code of libEngsasCppDB is provided with full source code distribution, so you can review its source code and comments in more details. The MySQL-related documentation and the source code of the library can be downloaded from the web-page LibEngsas Architecture: ----- This library is split into several components, each of which must be compiled before the others can be used: libEngsasCpp provides the basic functionality of the library. In the same way as in the case of Qt, it is possible to use the functions of libEngsasCpp in your program in C++, as such, it offers different Qt-like classes to work with data. It is also possible to create shared and object libraries. libEngsasCppDB
