History of AutoCAD Today, AutoCAD is used by more than 16 million people globally and is one of the best-selling business software products in the world. AutoCAD's heritage began in the 1960s with the development of the first general-purpose, desktop-based CAD software program called DynaCAD. Over the years, AutoCAD evolved from a desktop application to a full-featured, multi-user, network-capable CAD system. AutoCAD began as a desktop app on a microcomputer. Originally intended for engineers working in the automotive and aerospace industries, the first release of AutoCAD was called AutoCAD LT, and it came bundled with several automotive related drawing tools. This version of AutoCAD also included more than one hundred stock drawings. The tool set also included a human-machine interface (HMI) for creating and modifying drawings. In the 1980s, Autodesk began offering versions of AutoCAD for mainframe computers with a terminal that would run AutoCAD LT. The first release of this version of AutoCAD was AutoCAD/1.x, and it ran on an IBM mainframe system called the 3100. Another major milestone for AutoCAD was the release of AutoCAD Extended Architecture (AutoCAD/E), the first version of AutoCAD that could run on a wide variety of computers and platforms. By the late 1980s, the versions of AutoCAD that ran on mainframes and minicomputers were becoming outdated, and Autodesk decided to introduce a version of AutoCAD that could run on personal computers. This was the first AutoCAD release to be renamed from AutoCAD/1.x to AutoCAD 2.x. This new release of AutoCAD, which was first released in 1989, included three key changes. First, the drawing tools were rewritten to be compatible with the Macintosh system. Second, the system was redesigned to allow for a menu-based interface. Finally, the engine behind the software was rebuilt to support the capabilities of personal computers. This version of AutoCAD is known as AutoCAD 2.5, and it is still considered the default version of AutoCAD. AutoCAD Modeling tools Today, AutoCAD is still primarily a CAD system. That is, it is used to create two-dimensional drawings that depict an engineered design, such as a
