Rinzo is an extremely easy-to-use, yet powerful XML editor. It is meant to be used by beginners, yet it is powerful enough to allow advanced users to make use of it. It can generate XHTML documents from a XML file. It can read and write XML files, and it is capable of creating, editing, and deleting nodes and elements. Risk factors for failure of ultrasound-guided fine needle aspiration in the diagnosis of breast cancer in rural populations. Fine needle aspiration (FNA) is the first-line test for breast cancer in a rural population. Many factors impact the accuracy of the test, including operator experience and the number of passes required to obtain adequate cellular material. The study objectives were to determine the overall accuracy of the test and factors influencing it, including number of passes. Retrospective chart review of 952 consecutive breast FNA procedures performed by two attending radiologists with less than two years of experience in breast FNA. Number of passes and final cytologic diagnoses were abstracted from the chart. Final diagnoses were correlated to the FNA passes. The overall success rate for diagnosis with three passes or more was 97.4%. For aspiration on the right breast, the accuracy of diagnosis increased with the number of passes. For left breast aspirates, no difference in accuracy was noted by number of passes. The accuracy of aspiration of the breast increased with the number of passes in rural populations. 3).
