Vanguard is a highly scalable, cost-effective solution to help deliver your email to your users. Benefits: Vanguard delivers large

quantities of email messages quickly and efficiently. It does this by using sophisticated queuing algorithms to re-use connections, and by using Enhanced SMTP and other features. This means you do not need a top range PC to run Vanguard. Vanguard reduces the bandwidth needed to deliver and accept messages to and from the Internet. You can limit the bandwidth used for outgoing mail to avoid saturating a low bandwidth link. "K-BMS Management System" KeyMACRO system is a full featured Microsoft Windows based server that provides a robust email server platform for public, private and virtual domains. It provides for server set up and management. As it is based on Windows Server, it enables us to manage Key MACRO and related systems on the same platform as other applications. This is very important in the competitive field of email servers. KeyMACRO can be deployed in server mode with all of the services running as a Windows Service, or on a dedicated machine where all the services run on a machine which is not used for any other purpose. KeyMACRO enables you to build a whole network from the ground up using a Windows Server, or install a pre-built version of it, such as Windows Server 2003 or 2008 which is supplied as a Virtual Machine image. KeyMACRO has been designed for those users who want to run their own email server, or those who want to manage a stand alone server. With KeyMACRO you can configure the server, and manage it all from one Windows based interface. You can add, remove, or configure your servers as required, and you can also use the server to deploy your own software. KeyMACRO provides a very efficient email server, with the ability to deliver messages using two methods, a Blackhole method or Round Robin. You can also choose how your server handles senders, to send messages to your senders server. KeyMACRO has been designed from the ground up, to provide an extremely efficient email server. Because of the way it manages its internal resources, it is able to deliver and accept over 4 Million messages per month. KeyMACRO works with all major email clients, including Microsoft Outlook 2007/2003, Microsoft Thunderbird, and Mozilla Firefox. KeyMACRO enables you to tailor your email delivery to suit the way your business operates. You can send emails using either the built in e-mail client or you can connect to your mail server using any of the internet email clients. You can then control what happens when you receive an email from the server using

SMTP POP3 or IMAP4. You can choose to have it delivered immediately, you can have it held in your inbox until you get back from your holidays, you can have it saved locally on your computer, or you can have it added to your calendar system to be dealt with later. You can also add any number of email aliases, these are stored as mailboxes on the server, and 1d6a3396d6

What's New In Vanguard?

The QNE is the ideal mail server for a small business. It comes with anti-virus protection which means that your data is protected from the common virus infections that are all too common on the Internet. The QNE also supports all your business communications needs including: Email, VPN, SMS, IMAP, POP3, SMTP and NNTP. As a general rule, the choice of mail server software should be based on the computing power available to your server and the ease with which you can administer the server. If you already have your own email server, then it's probably a good idea to get the most up to date version of that software. However, if you're a small business that already has Microsoft Exchange installed and you are happy with it, then a more capable, up to date server such as the QNE will probably not be required. Support: Proprietary Support Flexible: Yes Free Features: Yes Portability: Yes Intuitive: Yes User Friendly: Yes Interface: Command Line Price: Free Virus Protection: AV Company Rank: Free Customer Review: Vanguard is really easy to install and the installation wizard guides you through the process so you should be up and running in no time. Once the install is done, you will be able to use the default configuration and use the wizard to create your own customized configuration file. The product includes a series of command line commands that make it easy to customize the configuration of the mail server and in addition it includes a series of wizards that guide you

through the process of creating your own configuration file. The documentation is extensive and is available on the companion website. Vanguard allows you to manage multiple mail servers from the same console, for example you can have a QNE mail server running at your main office and a QNE mail server running at your branch office with the same configuration. Because the QNE is a service pack based system, it is possible to upgrade to the latest version by simply installing the service pack. The QNE runs as a service, which means that it is independent of your operating system, so you can run it on any platform that you are running Exchange on, as long as you have Microsoft Exchange installed. The QNE also supports Active Directory integration, which makes it possible to integrate your Exchange and Active Directory environments. The QNE does not need to run on a fast machine. There are two network connections required to run the QNE and both connections can run on less than a gigabit network interface. Dealing with different servers, QNE is a mail server that does not require a lot of effort. It can be configured in a few minutes with the same configuration for every server that you use. Q
