## CacheCopy Portable

cacheCopy Portable is a tiny, lightweight utility that can rip images from various browser cache and save them to a folder. The tool may come in handy for users who come across various images on the web, but let's say, they forget to save them immediately. Most modern browsers save images and other associated files in the cache to speed the loading times, in the eventuality that users decide to visit those particular websites again. The application is designed to go through the cache and rip all images. However, it is important to note that the program solely has this role and that users still need to go through the images manually in order to find a specific image. Nevertheless, the tool can save a lot of time and energy, as otherwise users will be forced to find out where their default browser saves these images. The tool works with most modern browsers, although by default it displays just Chrome and Internet Explorer. In case of other browsers than the aforementioned, users can go to the Manual Selection and add the folder of their favorite default browser. There are also a few options that allow filtering the images to be ripped as well as setting up a pattern to the file names.
