## AutoCAD With Keygen [April-2022]

with its main component Exchange Server. History Autodesk released AutoCAD Activation Code as its first product in 1987. The first version, 2.0, was a DOS software package. AutoCAD Serial Key was produced by Autodesk Inc. from 1987 until 1998. Autodesk now produces AutoCAD through its subsidiary Autodesk Entertainment. The product is now cross platform, available on Linux, Mac OS X, and Microsoft Windows. The last version of Autodesk AutoCAD 2010 was released for Microsoft Windows on June 23, 2009. The latest version is AutoCAD 2011. AutoCAD 2011 was the first version of AutoCAD to support AutoLISP, which makes the program more flexible. The user is able to automate the drawing process using Visual LISP. In 2007, Autodesk released AutoCAD LT, a lower-priced (starting at \$295) version of AutoCAD. AutoCAD LT does not contain all features of AutoCAD. As of 2015, AutoCAD LT is the only version of AutoCAD to use the older DXF, and therefore cannot handle the newer 2014 drawings. In April 2014, Autodesk announced that the Windows version of AutoCAD LT will be discontinued from support as of April 2016. The last version of AutoCAD LT was AutoCAD LT 2009. In the summer of 2015, Autodesk introduced a new version of AutoCAD: AutoCAD 2016. Use and development The Autodesk software is developed by Autodesk Inc. in San Rafael, California, U.S. Software is also available for macOS, Linux and Microsoft Windows operating systems. On release, Autodesk products are bundled with a one-year subscription for the Autodesk Exchange apps. Autodesk Exchange apps are available for purchase separately. Some of the apps and products are available to companies who buy a commercial license for Autodesk software. The software is primarily used by architects, civil engineers, and other professionals for making drawings, blueprints, and other technical information. Autodesk recently developed a system to allow their software to communicate with both mobile and desktop devices.
