Functional modes In the early years of AutoCAD, users would generally start work by setting up a drafting table, drawing in the center of the table, and gradually moving the drawing to the right as they add details. This method is referred to as "drag-and-drop". In later versions, the user works in a paper space "book" (the space above the drafting table), from which details are drawn onto the paper by the use of a "lasso". When the user is ready, the details are picked up, and the book is moved to the drafting table. This method is referred to as "lasso and lift". "Paper space" In the early versions, a paper space was introduced and not intended to be used in a drafting table. In this space, a sheet of paper is placed on the drafting table. The user selects the part of the drawing that they wish to work on, and draws details on the paper. They can then pick up the paper, move it over to the drafting table, and if the details of the new drawing are acceptable, they save the drawing.

AutoCAD LT AutoCAD LT is a later edition of AutoCAD, which was developed from the mid-1990s to the present. It is commonly referred to as AutoCAD Classic, because it is a full, supported version of AutoCAD but is not the same as the current AutoCAD. AutoCAD LT includes many new features and improvements over the earlier versions of AutoCAD, such as the ability to work with DWG files, it includes ACIS file format support, new rendering options such as global illumination and global refraction, the ability to view and modify the properties of curves, the ability to view and modify multilines and multisegments, an extension of the right mouse click for additional commands, and other enhancements. It also includes a number of new commands and functions, such as placing annotations on a drawing, and viewing information about a drawing. Unlike previous versions of AutoCAD, it does not have any hidden files in the My Documents folder. Command-line automation In its initial version, AutoCAD employed a command-line interface to provide command-line editing. This system was popular for use with batch processing, as it allowed the AutoCAD command-line to be re-used in other applications. These scripts were typically written in an existing language such as LISP. Auto 5b5f913d15
