CardRecovery allows you to recover photos, videos and other types of multimedia files from memory cards, memory sticks, xD picture cards, micro drives, micro SD memory cards and also Secure Digital (SD), SDHC, SDXC, Compact Flash (CF), Memory Stick Duo (MS Duo) and Memory Stick Micro (MSM) memory card types. CardRecovery is an easy-to-use recovery software that allows you to recover photos, videos and other types of multimedia files that you have accidentally deleted from memory cards, memory sticks, xD picture cards, micro drives, micro SD memory cards and also Secure Digital (SD), SDHC, SDXC, Compact Flash (CF), Memory Stick Duo (MS Duo) and Memory Stick Micro (MSM) memory card types. The simple Wizard-like interface will guide you through a process that will recover your files by scanning the memory card itself. All you need to do is specify your memory card brand, memory card type, the memory card's capacity and the location where you would like to save the recovered files. CardRecovery will then automatically scan the memory card, if a file recovery is available, and if so, will display a list of the files found on the memory card. You can also preview the found files before recovering them by clicking the Preview button. You will then be able to select the files to recover, and choose a location where you would like to save them. CardRecovery Features:

- Automatic file recovery - CardRecovery will automatically scan the memory card, if a file recovery is available, and if so, will display a list of the files found on the memory card.
- Preview the recovered files - You will be able to preview the recovered files before recovering them by clicking the Preview button.
- Save recovered files - You can choose a location where you would like to save the recovered files.
- Multiple file types supported - The software supports a broad range of file types including JPEG, RAW, TIFF, MP3, MP4, MOV, WAV, MP3, AMR, WMA, MIDI, AAC, and more.
- Memory card type detection - CardRecovery will detect the type of memory card you have connected, in order to allow you to recover only the photos, videos or other types of multimedia files that you have on the memory card.
- Intelligent filtration - CardRecovery scans the memory card and discovers every potential location where a file is to

What's New In CardRecovery?

CardRecovery provides you with a useful software solution that uses the SmartScan technology to recover corrupted or accidentally deleted multimedia files from various types of memory cards. Designed with ease of use in mind, it enables you to retrieve lost photos and save them to your computer in just a few, simple steps. The wizard-like interface makes the application very intuitive and recovering your multimedia files becomes a matter of pressing a few 'Next' buttons. CardRecovery provides support for various card types, such as secure digital cards, MicroSD, xD picture cards, memory sticks, mobile phone memory cards, SDHC, micro drives and more. The drive that contains your memory card (the connected camera or the card reader) is automatically detected and all you have to do is select the camera brand and the types of files you want to recover, be it photos (including RAW images), movies, videos or sounds. When setting the output destination, be careful not to save the files on the source drive, in order to avoid accidental file overwriting. Once these options are configured, CardRecovery passes on to performing a full scan of the drive sectors in order to find recoverable files. This process exclusively includes read-only actions, which means that the data on the target drive is not modified in any way. You can view the scan progress, the total number of checked sections, the sectors that could not be accessed, together with a list of the detected files, their size and properties. The scanning process can be stopped at any time, if the file you are looking for is already in the list. Therefore, you don't have to wait for the application to scan the whole drive in order to recover files. Prior to saving them to your computer, CardRecovery enables you to preview the photos and select the ones you want to retrieve. In conclusion, CardRecovery is an intuitive digital photo recovery software that enables you to recover lost files from memory cards. Although simple, it will surely bring a smile on the faces of those who somehow managed to accidentally format their storage device or delete their content.
