The Why of Art History: Part I Art historians seem to think so little of religion that it is sometimes overlooked as a major factor in the development of art. It is easy to brush off religious institutions as irrelevant when they do not influence the artistic culture of modern society, as they did in ancient times. Even in times when religion is more blatantly obvious, such as the Middle Ages, we tend to ignore its impact, again,

until the modern age comes around and we start to see it as a major catalyst for the art world. By that point, we haven't developed a culture that will be as strongly influenced by this as the past one. Beyond aesthetics and pragmatism, many of us are simply not drawn to religious art. Having grown up with western art being mostly concerned with how it relates to the material world, we are simply not prone to accept it if it speaks to us on a different level. Regardless of whether or not this is the case for you, there are several common factors that seem to contribute to this. The first and most obvious one, which is most characteristic of religious art, is that it is often presented to us in figures and narratives. This is one of the defining traits of Christian art, and one of the

reasons that it is the style of art that most inspires us. It is straightforward, colourful, easy to digest, and to some degree, simple. Many artists followed the trajectory set by the Romans, whose style

A: You could try using OWASP ESAPI Using ESAPI ESAPI is a Java EE library that implements the Secured Web Services (SES) API. It includes a set of API classes that can be used to implement security for Web services, XML web services, Java applications, EJB, and Java EE applications. ESAPI is an integral component of the Jakarta project and is a contributor to the Java Security API. An ESAPI application has the following features: It encapsulates all the decisions about security, so it makes managing that easy. It provides an API to program a security policy for the application that makes it easy to use standard security APIs. It provides flexible role-based security. For example, an administrator application can be easily configured to provide access to the administrator role,

and another application can be easily configured to provide access to other roles, such as a contact role. It provides a secure communication channel using SSL/TLS. It uses the existing Session object to secure the service. You can download the free version that includes ESAPI and an example application that has been tested with all the latest Servlet, J2EE and JMS API versions. The application and the data sources are available from the code.google.com group.
