What's New In?

This is a simple plugin (written in C++), that will capture the desktop or active window in jpeg, png, tif, bmp, gif format. You can configure the interval for capturing, or decide to start it by pressing the Print Screen Key. It is also possible to resize the window. You can choose to record the window in the active workspace, or into the workspace at the top of the screen. Note: It is also possible to edit this plugin to select the window to be captured by choosing a different area of the window. Usage: 1) In the plugin preferences window, change the image type for the capture. It is possible to choose the formats jpeg, png, tif, bmp, gif. 2) Press the Print Screen key. If you press it after stopping the capture, it will resume the capture of the active window in the configured workspace. 3) During the capture, you can change the options for the plugin, such as: - number of pictures taken in a second. - interval for capturing. 4) After capturing the window, it is possible to resize it (by dragging the borders). 5) After you have finished the configuration, press the OK button to save the options. Of course, you can also change the list of workspaces by editing the file workspacelist.txt. If you do not like the plugin, you can remove it from your Plugin Control Panel, by deleting the file Cropper.TimeCapture.dll. You can download and try it, it is free of charge. But it is a commercial plugin. Info: This is my first plugin. I hope it works! It was written in C++ and Windows Script Host, so do not expect it to work in Linux. But I tried. I hope it works. Credits: This is a work of art. The design, programming and coding, it's all by me. Community: At the moment, this plugin is in my own private repo. It is not on the Cropper.org, yet. I plan to make it an official plugin soon. Document: Check the list of options for the plugin. There you will find the documentation. (Rafael Noubir) Description: This plugin lets you crop the images in 3 ways, proportional (1:1), area (landscape) and fixed size (square). It can be used for adding a fixed size border to pictures, so they fit into your page width. It is also possible to add a background color to your images. The plugins provides a setting for choosing a picture, then you can do whatever you want with it. Introduction: If you want to crop a picture and add a border to it, you can use the plugin, the other
