We follow your advice, so we use pbuild and not cowbuilder, and the debugcommand is just a convenience in xulrunner-build-debug. @bmalodal Thank you for your nice explanations! @soundbarrier Code: Unsupported target not supported by your current browser. I think, you are right, but maybe you need to update xulrunner version. Just a note: With Mozilla 1.9 Mozilla doesn't support XUL 1.9 anymore, so this might lead to an error like "Unsupported target not supported by your current browser." @Sven_Loft Thank you for your comment. Spket IDE Features: Code completion Syntax highlighting Content Outline Graphical function window Real-time execution of a code snippet Configurable menues Easy install and uninstall Source codepackage multierror import ("fmt" "github.com/hashicorp/errwrap") // Prefix is a helper function that will prefix some text // to the given error. If the error is a multierror.Error, then // it takes precedence over the provided prefix and returns // a patched error. If there is no error or if the error is // nil, then this function returns the provided prefix. // // This is useful to use in combination with // multierror.ErrorFormatters. func Prefix(prefix, errorText string) error { if error, ok := errorText.(errorWrapper); ok { err := error.err if err!= nil { return multierror.PrefixError(prefix, err) } return err } return fmt.Errorf("%s: %s", prefix, errorText) } // PrefixMultiError allows you to prefix multiple errors together. // // This is particularly useful in combination with WithMaxError // which will return a fatal error if too many errors are detected. func PrefixMultiError(prefix, errorText string, errs...error) error { return Prefix(prefix, Wrap(errs...).Prefix(errorText)) } // PrefixStacks ensures that the prefix is isolated. In other words, // if the prefix is printed, it will only prefix the current stack // and not the entire call tree.
