The (Visual) Basic language is commonly used to code automation software for Autodesk products. The VBA language is well supported in AutoCAD 2009. AutoCAD also includes the ObjectARX library, which in turn is built on top of the C++ ObjectARX library, to provide the most efficient solutions for user interfaces. The Autodesk Exchange Apps Platform is a solution used by Autodesk to create new forms of "apps" for Autodesk products, some of which are fully compatible with the desktop versions. Autodesk Exchange is the most used programming language for creating Autodesk plugins. A plugin is a program that can be downloaded from Autodesk Exchange and added to a CAD product to make it more powerful. The standard format for Autodesk plugins is the DXF file. There is a list of Autodesk plugins available on the Autodesk Exchange website. AutoCAD is available in three editions: Personal, Professional and Architectural. Each edition includes the appropriate technology, applications, tools and fonts needed to meet the needs of its intended audience. AutoCAD is typically used in the industries of architecture, civil engineering, surveying, mechanical engineering and GIS. AutoCAD Architectural is generally targeted at architects, engineers and landscape architects. Professional (or standard) version is generally targeted at designers and drafters. These products allow the user to draw on a 2D or 3D model. In addition, the following add-on applications are

At the moment the MDX Toolbox only supports a subset of the MDX language features. It will not be able to create: Transactional MDX queries (unless you have installed the required EMS plugins) Select statements (not yet) Variables (not yet) Functions (not yet) Aggregate functions (except SUM) The only restrictions it supports are: Updating queries using WITH UPDATE () Where clauses with \$EXISTS Usage Download the latest version of the MDX Toolbox from the Microsoft Developer Network. Run the installer. It will install the MDX Toolbox in the following directory: %ProgramFiles%\Microsoft\MSX\MTB\v5\MDXTools\ If the MDX Toolbox has not already been installed, the installer will install it for you. If you are installing this for the first time, it will also install the MDX.RTM.4 redistributable package and the EMS.RTM.4 redistributable package, required for the MDX Toolbox to work. Run the executable MDXToolbox.exe. It will run in the default browser. Click Help->Install to Install the necessary plugins for the MDX Toolbox. You can now start using the MDX Toolbox. The MDX Toolbox gives you two modes of operation: Quick start The Quick start mode starts an empty query. It allows you to enter the MDX query and press enter, and the MDX Toolbox will create an MDX query for you. This is the most convenient mode of operation. Advanced mode The Advanced mode opens the MDX Query Editor. It also opens any queries you have already entered in the MDX Toolbox. Entering MDX queries The Quick Start mode allows you to enter an MDX query into the Query editor.
