FPS (FPS - First Person Shooter) is a type of game that lets you play the game from a first-

Stealth Browser is a lightweight application that allows users to surf the Internet in the easiest way possible. This web browser was designed from the ground up as a secured navigating tool that helps you check out web content by providing stealth capabilities. Since this a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you want search the Internet for different topics on the breeze. It packs a clean and simple layout. When minimized, Stealth Browser sits quietly in the system tray until called upon. Moreover, this cross-platform utility displays the icon for the Local Area Connection, so other users won't notice that you are actually navigating on the Internet. The name of the application can also be changed. The minimalist window allows users to insert a valid URL link, go back or forward, or refresh the current page. Hotkeys are also available for a better control of the entire process, buy they cannot be reassigned. Furthermore, you can view the web pages before actually printing them, as well as copy the selected information to the Clipboard. The entire search history can be deleted with a single click, and you can also pick the opacity level. Stealth Browser gives users the possibility to download files by specifying the URL and saving directory, and send emails by providing data about the sender and receiver's address, SMTP server and subject. All things considered, Stealth Browser offers a simple software solution for helping you surf the Internet in stealth mode. Thanks to its overall simplicity, it is suitable even for less experienced users. Key features: - Stealth browsing capabilities. - Hide browser windows. - Copy URLs from selected pages. - View web pages before printing. - Check out web content by providing stealth capabilities. - Use the built-in searching engine. - Export search results to a text file. - Import and export emails by providing data about the sender and receiver's address, SMTP server and subject. - Copy data to the Clipboard. - Save web pages as PDF files. - Download web pages. - Use HotKeys. - Lots of other options. A comprehensive Internet tool, Safari allows you to browse the World Wide Web, access your social network sites, take advantage of search tools, and more. Unlike most other browsers, Safari does not display advertising. It'

What's New in the Stealth Browser?
