Our users have reported the following features as part of the application: Scaling, reset, a fully-featured route-following system, route history, and three-dimensional plotting. The application has a very clean, user-friendly interface with a lot of very useful features, including a chart-graphical view, zoom control, and a steering wheel. GPS Converter may not be the best app for those who want to create their own animations but it is perfect if you want to export any type of animations. AnimateIt supports MS Transparent PNG, AVI and WMV. GPS Converter is a straightforward piece of software that

enables you to convert coordinates in three modes: between decimals, minutes, and minutes and seconds. All you have to do is enter the latitude and longitude for any of these methods. Results are shown in real-time mode, and you can add the coordinates to a list, in order to later copy them to the Clipboard for safekeeping. In addition, GPS Converter is able to access Google Maps and fetch an image on the map of the exact position you have established, by processing "By decimal" data. There are no other notable options available here. For example, you cannot export all coordinates to a file to simplify the data extraction process. The application is very quick in displaying converted GPS coordinates, and it uses a

barely noticeable amount of CPU and RAM. No error dialogs were shown in our tests, and the app did not hang or crash. To sum it up, GPS Converter provides a straightforward solution to performing latitude and longitude conversions, and it can be handled even 1d6a3396d6

A Google User Easy to use, but no option to import to Google Earth A Google User Are there more options. A person actually needs to know what they are doing. Even I was not able to figure it out. Looks nice though. A Google User Hi, I tested the application by choosing decimals as the mode of conversion but after that i found that i was not able to change the setting. A Google

User What is GPS Converter? And it's not free??? but we can use it. For example, what if I want to convert my coordinates? Also, it's not a device application, so I have no way to import the converted coordinates into Google earth. A Google User sounds great, but cannot find 'target map location' in the options. please fix. A Google User Did you know that Garmin Forerunner 800 also has a GPS coordinates option like this. I did not know until I was able to locate the option. I am not a Garmin Forerunner owner. If you know Garmin, could you please let me know how to do this function. A Google User Lousy horrible program
