The Current Drafting Window The current drafting window is the primary view window. It includes a number of views that the operator can choose to switch between, including the drawing space (1), drafting space (2), detail layout (3), and wireframe. The detail view (4) allows a drafting operator to use a scaled (zoomed in) display of the drawing data to see the detail of the current drawing elements (plans, sketches, dimensions, and text). If the detail view is closed, the user can select an option in the drawing space view (5) to switch between a drawing view and a detail view. The drawing space view displays the current drawing content. The drawing space view is a combination of paper space (6), layout views, and toolbars. The drawing space view also includes a number of windows and properties that help the drafting operator, including a viewport, palettes, and tables. The drawing space view is created from a set of drawing space templates.

Top of Page The drafting space (7) view is the primary view where the drafting operator creates new drawings. The drafting space view displays the planning canvas, where the operator draws and edits an engineering, architectural, or other plan. The drafting space view is a combination of paper space (8), planning layout views, and toolbars. The paper space view displays the paper space, where the drafting operator types, prints, and annotates the text.

AutoCAD Exchange AutoCAD Exchange is an online service and is part of the Autodesk Lifecycle Services (ALS) platform. It allows Autodesk Design Suite users to import data from applications such as AutoCAD. (AutoCAD Exchange supports several third-party applications including Raster Source, Stream Flow and others.) An important feature of Autodesk Exchange is the ability to preserve the drawing information and make it portable. When a new AutoCAD drawing is created, a Portable Drawing (.DWG) is created automatically and associated with it. When the drawing is opened, the .DWG file is retrieved from the user's computer and the .DWG file is imported to a different drawing on the same computer. When the drawing is closed, the .DWG file is downloaded back to the user's computer. In the current version of Autodesk Exchange, .DWG files can be created from three different sources: From an existing .DWG file, using the "Save As" function From an existing .DWG file, using the Save function From an existing drawing in another application, using the "Export" function Note that many other applications have this feature: ArcGIS Explorer Civil 3D FieldMap Map3D Map3DS MicroStation MicroStation V3 NET Workbench Soil/Hydrology VectorWorks MicroStation V3 AutoCAD Architecture The AutoCAD Architecture product family, supported by Autodesk since the release of AutoCAD 2007, offers a variety of rendering and modeling tools. The product family has three products, AutoCAD Architecture 2014 (2014), AutoCAD Architecture 2013 (2013) and AutoCAD Architecture 2012 (2012). Each is a complete CAD product on its own, but can be integrated with other products in the family and allows integration with other databases. Autodesk Architecture for Autodesk AutoCAD (2013) is a complete CAD design application suite that has the architectural graphics capability in AutoCAD. It includes comprehensive 2D design tools and rendering tools. The program is also available as a web based application Autodesk Architecture with Autodesk AutoCAD. Architecture for Autodesk AutoCAD is licensed for a single user, and the Autodesk Architecture for Autodesk AutoCAD plugin allows the program to run in conjunction with the other Autodesk 5b5f913d15

Most popular features in AutoCAD graphics If you're interested in a feature you don't see listed in this review, try a Google search for AutoCAD Feature. The way it works: With the feature enabled, you can now directly edit objects and attributes of other drawings in your project. Objects in the drawing that are linked to a linked drawing are automatically updated and linked to a newly edited drawing. You can also add properties and select objects. You can use linked drawings to sync changes to a drawing. AutoCAD's new Linked Drawing feature automatically updates existing drawings on your desktop when you update or edit objects and properties in a linked drawing. You can also link drawings that are stored on your desktop or on network drives. When you save your drawing, the drawing on your desktop will be automatically updated with the changes. The same will be true of linked drawings. Linked drawings can also sync their drawings together, so changes made on one drawing are reflected on the other drawing. You can also reuse the same drawing on other drawings. AutoCAD's Linked Drawing feature integrates into the standard update and autosave workflow. Linked Drawing's new feature, Bounding Box, is like having a second dimension. It shows the outer edges of the drawing, helping you to visualize what your drawing will look like if you export it to a physical product, like a CD or a DVD. The Boundary Box can be displayed in any number of views (x, y, and z). When you use the Options button in the top-right corner of the Boundary Box display, you can choose to display selected object properties in the box, based on their location or location constraints. This can help you visually create components for assemblies that meet your specification. You can also use the Feature options to toggle between the traditional style of boundary box and a new box with splines. Note: The new "Edit" feature that allows you to apply the same edits to objects in linked drawings, replaces the previous "Edit Linked" feature. Document Sorting: When you're making a series of drawings, it can be difficult to keep them all organized, especially if you make more than a few changes to a drawing. With Document Sorting, you can organize your drawings by the drawing type and size they represent. When you organize drawings by the type of document, you can quickly access the documents and drawings that represent your project and also create more subfolders to separate
