## ASKY With License Key Free

=====  
Introduction: A system tool that consists of two utilities: 1. Sifter - It's a tool that can analyze data inside CSV files and find misaligned records, comparing them to a specific benchmark file of your choice. Therefore, if you own a file that comprises fields that are not lined up or duplicate fields, ASKY can easily take care of these issues for you. 2. Utilities - These include a file splitter and text replacing capabilities, which can fix up data and make it ready for insertion back into the original file, and an integrated file splitter and text replacing capabilities, which can fix up data and make it ready for insertion back into the original file. Function: It provides these two options 1. A file sifter, which can analyze data inside CSV files and find misaligned records, comparing them to a specific benchmark file of your choice. ### What's New In?

ASKY is a versatile utility that can help you easily use the power of CSV files in your daily work. The application provides a powerful Database-like SQLite3 interface for CSV files. As an example, you can insert, update, or delete records, or perform queries against your CSV files. ASKY has three separate tabs for each function; these are the Sifter, Database and Utility. The Sifter tab enables you to detect and fix up misaligned records, identifying those records that are not aligned with the ones in your benchmark file. If you open the file as an example with aligned records, ASKY will place a box of information in the window and mark the misaligned records with an orange marker in the CSV file itself. The Database tab enables you to manipulate data and records inside your CSV file by inserting, deleting, or moving records, or by modifying the order of the fields in the file. The Utility tab is for advanced queries, enabling you to search for records, add or remove fields, change the format of the date or time, and so on. ASKY features: 1. Detect and fix up misaligned records, highlighting them in red in the CSV file itself. 2. Fix a mismatch between the delimiter and the file format (e.g., no quotes, or different field delimiter) 3. Extract and read all records from the file 4. Search for records 5. Insert, delete, move or re-arrange records in the file 6. Create new fields in the file (multiple fields in the same row) 7. Change the format of date or time 8. Change the order of the fields 9. Filter by various criteria (e.g., field, record type, date or time, etc.) 10. Query the file 11. Export/Import data 12. Remove blank rows from a file 13. Sort data 14. Edit the file (add new record, delete one, etc.) 15. Show error messages 16. Update the file (fix an outdated benchmark file) 17. Reset the benchmark file (if needed) 18. Run a query against the file 19. Convert CSV file to Excel format 20. Select Excel files for conversion 21. Import Excel data to CSV file 22. Resize an Excel file 23. Resize a CSV file 24. Export data from an Excel file to a CSV file 25. Create a CSV file with automatic numbering 26. Create a CSV file with alternating numbers 27. Create a CSV file with random numbers 28. Print a file 29. Print a selected record 30. Copy records from one file to another 31. Move a file to another folder 32. Create a zip file from an Excel file 33. Extract data from a zip file 34. Zip
