Automation is made possible by the CADApp and PaperSpace modules. CADApp has AutoCAD's lower-level API's and allows plugging in to many of the standard features. PaperSpace is an interface for generating custom views of CAD drawings and editing existing views. CADApp, formerly known as AutoCAD ActiveX Control, is an open source AutoCAD API written in C++. It allows access to almost all of AutoCAD's features, including functions that control rendering, creating and editing drawings, managing the model and the drawing canvas, manipulating the coordinate system, managing the active view, managing layers and objects, and more. The API also supports plug-ins and many controls. CADApp is an ActiveX control and has been bundled with AutoCAD since AutoCAD 2009. It is possible to use CADApp with Autodesk's own Visual LISP plugin and Microsoft's Visual Basic plugin to provide seamless integration with AutoCAD.
