

1.2 MPU-6050, In-line, Axis-Aligned,. The MPU-6050 consists of a triple axis MEMS IC with 6-degree of freedom (DOF) XYZ acceleration, compass, gravity, and magnetometer sensors along with an auxiliary temperature sensor, and a dedicated communications interface.1 Axis - Aligned MPU-6050 In-line Accelerometer read more.. Learning Ruby 2.0 - dmethvin ===== mbrubeck The last few years have seen a lot of innovation in the Ruby community, and the Ruby Best Practices site continues to be an excellent source of resources and advice. Thanks for sharing this! ----- bcl \*lib.rb[1] after 2.0? Anyone else see this? [1] ~~~ dmethvin I'd say this is a good description of the 2.0 design decisions that need to come out of the community. We don't necessarily have to include them in the core. For example, the library parallel and serial ports did not make it into 2.0. I would say that was a good decision in that, despite the necessity of learning to use them, they are slow and not particularly useful ports for getting work done. In addition, if you look at the RubySpec[1] and other

similar documents, some of the current plans have not been adopted yet. Regarding lib.rb, I'd guess that's an artifact of the order of reading the docs. They are a really good resource, but the core docs are also huge, and they are meant to be followed in order. I would hope the legacy docs, though, are

value property in.NET How to override enum property value using.NET reflector. With C# language, we can do it easily: enum MyEnum:int { ValueA, ValueB } protected void Page\_Load(object sender, EventArgs e) { if(MyEnum.ValueA == MyEnum.ValueB) DoSomething(); // Use ValueA else DoSomethingElse(); // Use ValueB } But, I want to do the same in C# using.NET reflector. I don't want to change the enum itself. A: Convert the enum to an int and use it like this: if (MyEnum.ValueA == MyEnum.ValueB) { 82138339de
